E-General Consent: Development and Implementation of a Nationwide Harmonized Interactive Electronic General Consent

Personalized health research depends on the availability of health-related data and leftover samples from routine practice. This requires a specific consent by respective patients, the so-called «general consent».

Accordingly, all Swiss university hospitals have established processes to collect general consent information from their patients. Unfortunately, these mostly paper-based processes fail to reach the required number of patients.

We therefore propose to develop a solution to electronically collect general consent information that can be used in addition to the paper-based processes. Thus, hopefully increasing the number of patients with general consent and consecutively the amount of data and samples available for research.

Date: Monday, 18 March, 2019
Time: 16:00 – 17:00
Room: Hörsaal 2, Klingelbergstrasse 70, Basel
Contact: Silvia Schaub (dcc@sib.swiss)
